### **The Punta Thurwieser Rockfall on 18th September, 2004**

#### **– an eyewitness's description of the event**

On 18th September, 2004, at 12:43 a group of Slovenian mountaineers observed a very rare geological event – a large rockfall. It happened in the southern wall of Punta Thurwieser - 3657.6 m - in the Ortler group, Northern Italy. All phases of the event were photographed at very good visibility. We are presenting these pictures along with the eyewitness's description.
