

Tidal observations in Astrogeodetic Observatory in Jozefoslaw

J. Bogusz

Warsaw University of Technology

Tidal gravimetric observations in Astrogeodetic Observatory in Jozefoslaw started in 1993 using LaCoste&Romberg model G gravimeter. Since 2001 Observatory has been equipped with the ET-26 model dedicated to the stationary gravimetric measurements. Tidal research program also encompasses environmental studies to make the results more reliable. This elaboration presents the analyses of the data collected during 2004, comparison with the previous obtained results and the future plans of the Observatory.
