Evaluation of discharge series on Danube River in Bratislava

100 - years discharge data series (1901 - 2000) on Danube River in Bratislava has been processed and evaluated. For the processing we have at disposal also the discharge series 1891 - 1900 and discharge data after 2000. We have evaluated the regime of mean daily discharges, mean monthly discharges, and mean yearly discharges as well as the extreme phases of the runoff. We have dealt also with a trend of development of the runoff course and with a flood index of Danube in Bratislava.
