

Absolute paleointensity independent of domain state

Mark J. Dekkers(1,2) and Harald N. Böhnel(1)

(1) Centro de Geociencias, Campus Juriquilla, UNAM, Mexico (2) Paleomagnetic Laboratory 'Fort Hoofddijk', Department of Earth Sciences, Utrecht University, Utrecht, The Netherlands

We will present a method that produces expected paleointensities to within 5% in natural and artificial samples containing multidomain grains that were given a laboratory TRM of known intensity. Application to some historic lavas yields correct values to within 2-5%.
