

Short history of the Hungarian military meteorology

K. Radics , N. Cs. Péliné

Geoinformation Service, Hungarian Defence Forces

During the long and progressive development of martial science it became obvious that the use of meteorological information is necessary and indispensable. Using the experiences of the first meteorological services formed during the 1st World War the first organizational elements (aviation meteorological groups) of the Hungarian Military Meteorological Service were founded around 1932-1933. Since then the service was reorganized several times. More than 60 years later the NATO membership raised the question of effectiveness of the meteorological support.

In our presentation detailed history of the structure, the main tasks, the measuring systems, the research and development, the education and training system of the Hungarian Military Meteorological Service will be demonstrated.
