

# Communicating Probability: Seasonal forecasting case study Dee Cotgrove, Berlin, September 2011

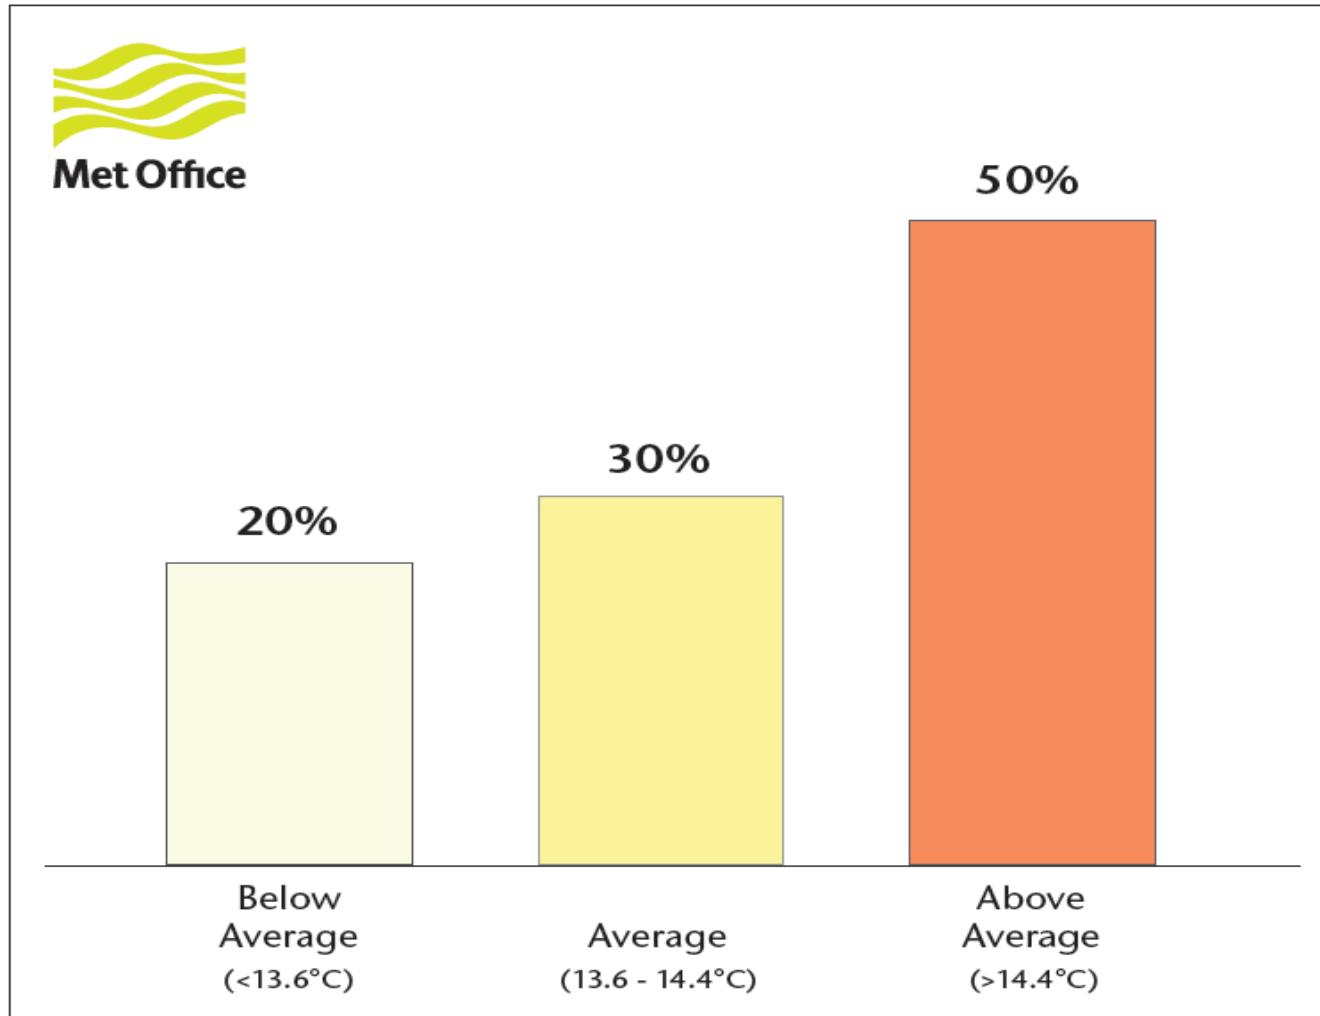

# A short history

- Introduced in 2005
- Withdrawn in 2010

# UK temperature probabilities

# Odds on for a BBQ summer

## Rainfall

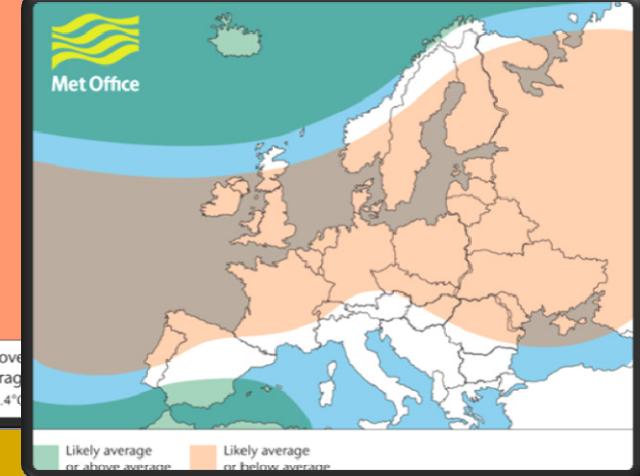

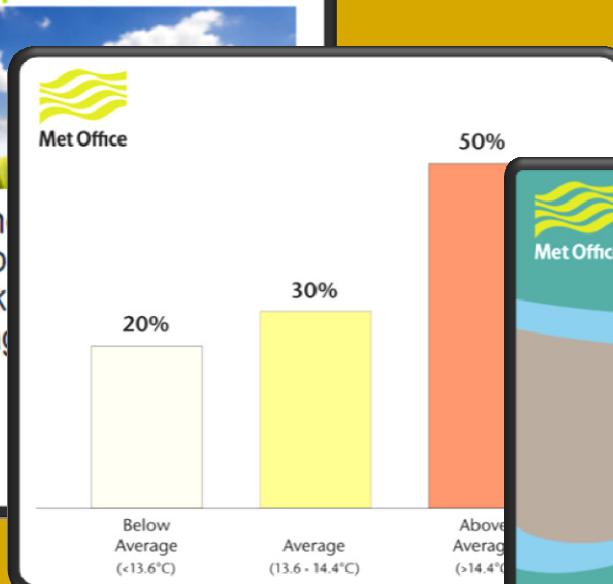

For the UK and much of northern Europe rainfall is likely to be near or below average. A repeat of the wet summers of 2007 and 2008 is unlikely.

## Temperature

For the UK and much of northern Europe temperatures are likely to be near or above average.

## Messages

- “...Mr McCallum said there was a 50% chance of above average temperatures and a 30% chance of average temperatures. The chance of the summer being a washout were around 30% he added...”

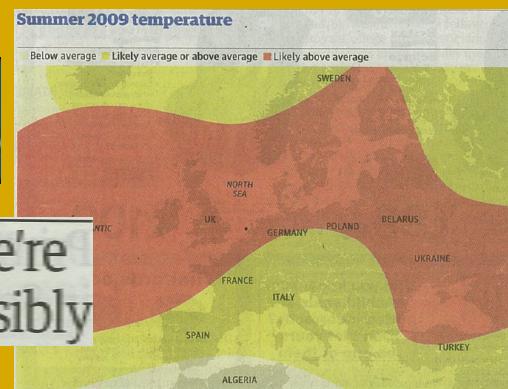

# Odds on for a BBQ summer

**the guardian**

Forget gloom, doom and recession. We're heading for a hot, sunny summer. Possibly

# Odds on for a BBQ summer

Three months later...

The image shows the front page of the Daily Mail newspaper from Thursday, July 30, 2009. The headline reads: "A mother of three and a brilliant lawyer... what does this woman's suicide tell us about Britain today?". Below the headline is a large, bold, black title: "WHAT A SHOWER!". Underneath the title, there is a sub-headline: "As millions of Britons holiday at home after promise of a 'barbecue summer', how did the Met Office get its forecast so wrong?". At the bottom of the page, there is a photograph of several tents in a flooded campsite, with a person in a red kayak nearby.

# Why did it fail?

- Poorly understood
- Media interest in extremes
- Not fit for purpose

Met Office

# Discussion

# I want long range forecasts for.....

Government,	Resource planning for <b>extremes</b>
Specialist users	Planning for <b>extremes</b> , buying forward
Science community	Forecasting <b>extremes</b>
Public	Reassurance UK ready for <b>extremes</b> , <b>sunshine hours</b> in school summer holidays
Media	A story with legs, drama around <b>extremes</b>

Nb: needs user research to validate
