

The High Energy Stereoscopic System: Latest Results

J. A. Hinton (1,2) for the H.E.S.S. Collaboration

(1) Landessternwarte Heidelberg, Germany (2) Max-Planck-Institut fuer Kernphysik, Heidelberg, Germany

Gamma rays are produced in the interactions of energetic particles and hence provide a probe of the non-thermal universe. The High Energy Stereoscopic System (H.E.S.S.) is currently the most sensitive instrument for gamma-ray observations at energies around 1 TeV. After two years of full operation, H.E.S.S. has produced significant results in several areas of galactic and extragalactic astronomy. I will describe our new results on supernova remnants, pulsar wind nebulae, molecular clouds and active galaxies.
