

Synergies between solar VUV radiometry and imaging

J.-F. Hochedez (1), T. Dudok de Witte (2), V. Delouille (1) et al

(1) Royal Observatory of Belgium, (2) LPCE CNRS, France

This presentation will discuss the benefits of bringing together solar image data and VUV radiometer time series. We will show in particular that algorithmic processing allows to gain deeper insights. The frame of the investigation is the PROBA2 mission in which the LYRA VUV radiometer operates next to the SWAP EUV imager.
