

# **INTEGRAL monitoring of 4U 1702-429**

**M. Cocchi**, et al.

IASF/INAF, Rome, Italy

The neutron-star X-ray binary 4U1702-429 is being monitored by INTEGRAL in the framework of the satellite Core Program. So this bursting source is observed with unprecedented sensitivity at high energies, allowing for a more accurate study of its bolometric characteristics. Preliminary results of the data analysis are presented.
