

Establishment of the Polish part of the EUPOS network of reference stations

J. Sledzinski

Warsaw University of Technology

The general information on the Project EUPOS (European Position Determination System) is given in the paper. The Project consists in establishment of about 440 multifunctional reference stations in 14 countries of Central and Eastern Europe. The stations will provide signals for both geodetic point positioning and for land, air and sea navigation. Polish part of the EUPOS network will consist of 86 reference stations. The Head Office of Geodesy and Cartography has got the financial support from the EU Fund for Regional Development. According to the concluded agreement the Polish part of the network should be operating till September 2007.
