(abokwa@espere.net) (2) Max Planck Institute for Chemistry Mainz, P.O. Box 3060, 55020  
Mainz, Germany

The ESPERE Association has been founded in order to establish a lasting and international umbrella organisation and communication forum for scientists and teachers committing for environmental education. Members, supporters and partners may either be interested to promote environmental education on an international scale or be professionally involved in respective projects. ESPERE (Environmental Science Published for Everybody Round the World) is an open and independent association and sees its main task in mediation between diverse projects on environmental education, activities of research institutes and networks, school authorities and teachers. Thanks to the ESPERE Climate Encyclopaedia ([www.espere.net](http://www.espere.net)) the association administers an own multilingual educational resource and provides therefore an established platform serving as a node in international networking.
