Exploration of the solar radiative zone by gravity modes: magnetic implication for solar activity

R. Garcia, **S. Turk-Chièze** and the DynaMICS team

SAP/DAPNIA/CEA, CE Saclay, 91191 Gif sur Yvette Cedex, France

SoHO has opened the door to the exploration of the gravity modes which are extremely useful for a dynamical approach of the radiative zone. Recent results will be presented. Since several years, a space successor of GOLF/SoHO called DynamICS is under study, it will explore the internal radiative magnetic field and the core rotation.
