The project EUropean Fleet for Airborne Research, known as EUFAR, offers new possibilities for training and education for a domains that becomes more and more difficult due to very expensive costs. The paper presents the program that EUFAR developed in order to help countries from EU to share data, experience and knowledge, through campaign programs and summer schools. The aim of this program is to provide the "future of the fleet" with new, passionate researchers and to rise the interes of "unexperinced" possible future users in these kind of data.
