

Tsunami Hazard for Guadeloupe (French West Indies)

N. Zahibo, E. Pelinovsky and I. Nikolkina

Université Antilles Guyane, UFR Sciences, Guadeloupe (F.W.I.) France

Detailed analysis of historical data of tsunamis in the past 500 years in Guadeloupe (French West Indies), collected in different books, papers and sites is given. Totally, 11 events are selected as true and almost true. 7 tsunami events have been generated by the underwater earthquakes; 3 events - by the volcano eruptions, and one is a teletsunami. The geographical and temporal distributions of tsunami events are studied.
