

The building of hydrological community

Mikhail BOLGOV

Water problems institute

1. To understand the role of hydrological community, it is necessary to evaluate the situation in this subject. It means that we need to distinguish processes taking place in hydrological practice, to select of different organization forms and evaluate their role, to understand the place of water problems in the common activity (scientific, technical, legal, economical, etc.). 2. The definition of the ways of the construction of the hydrological community means: 1) the necessity to discuss the paradigm (first of all, the scientific one); 2) the coordination of the science development in this topic; 3) the direction of the technical knowledge development; 4) the formation of the unions and groups uniting the professionals in different fields of hydrology; 5) the analysis of the technical (university) education and the system of the refresher courses in hydrology.
