

The Experimental Hydrology Wiki

T. Blume

Institute for Geoecology, Section of Hydrology/Climatology, University of Potsdam, Germany
(tblume@uni-potsdam.de)

The Experimental Hydrology Wiki will help us to learn about, recommend, question and discuss new and established, basic and advanced methods of experimental hydrology.

It will help us to avoid reinventing the wheel each time we start out measuring something we haven't measured before.

It will help us not to make the same mistakes others have made before us.

It will help us to share new ideas and concepts.

It will help us to find the methodology and the equipment suitable for our investigation.

However, a wiki needs contributors! Without them it cannot exist.

The general idea and layout of the Experimental Hydrology Wiki is presented here along with an invitation to all experimental hydrologists to contribute with their knowledge and experience!
