Northern Eurasia Earth Science Partnership Initiative (NEESPI): An update

P. Groisman (1), R. Lawford (2)

(1) UCAR Project Scientist at U.S. National Climatic Data Center, Asheville, North Carolina, USA (pasha.groisman@noaa.gov), (2) International GEWEX Project Office, Washington, D.C., USA

Three years ago NEESPI was launched with the release of its Science Plan (<http://neespi.org>). Gradually, the Initiative was joined by numerous international projects launched in EU, Russia, the United States, Canada, Japan, and China. Currently, serving as an umbrella for more than 115 individual research projects (always with an international participation) with an annual budget close to \$15M annually, the Initiative is in full swing. An overview of the current NEESPI status and its first achievements will be provided.
