Energetic Particle Populations and the Atmosphere

M.-B. Kallenrode

FB Physik, University of Osnabrück, Germany (mkallenr@uos.de)

Precipitating energetic particles from different sources (sun, magnetosphere, galactic cosmic rays) ionize the atmosphere and modify its chemistry. In this talk, recent developments in modeling atmospheric ionization by different particle populations in different height ranges will be reviewed. Special attention will be paid to the problems in model verification and the available data basis.
