Driving mechanism of back arc basins in the Central Mediterranean region

D. Babbucci, M. Viti, C. Tamburelli and E. Mantovani

Department of Earth Sciences, University of Siena, Italy (babbucci@unisi.it)

The geodynamics of trench-arc-back arc systems in the world is still object of debate. Significant insights into this problem may be gained by comparing the space-time distribution of major post- middle Miocene tectonic events in the Central Mediterranean area with the implications of subduction-related and non subduction-related driving mechanisms.
