A compilation of geophysical data from different Spanish funded projects has been arranged in order to be available by ftp to any applicant. This database comprises images, seismic reflection, aeromagnetic and well data from different parts of the Iberian Peninsula both on-shore and off-shore and also from the off-shore coast of Chile. They were acquired from 1961 to 2007. The collected data has been changed from old format and media to standard format and recorded in both DVD and hard disk media. All these data are available by ftp to all applicants who submit a request in <http://xeon.ija.csic.es>.
