## **Opportunities for CEGRN-Consortium within FP7**

**D. Medak, B. Pribicevic**

Faculty of Geodesy, University of Zagreb, Kaciceva 26, Zagreb (dmedak@geoinfo.geof.hr)

After successful finish of the project CERGOP2/Environment within Fifth Framework of European Commission, new funding scheme for the future research in Central European Geodynamics is needed. Within the CEGRN Consortium, Croatian partner Faculty of Geodesy, University of Zagreb got the task to monitor Calls for Proposals within Seventh Research Framework Programme of European Commission. The goal of this presentation is to give a critical overview of opportunities for high quality project proposals which should help to solve unanswered research questions during the previous period. Special attention will be given to the need of establishing a network of permanent observation facilities on the eastern coast of Adriatic Sea, as one of the most active geodynamic regions in Central Europe.
