## **Climate change and precipitation extremes**

**H. Thornton**, M. Gallani, P. Dempsey, D. Hollis

Met Office, United Kingdom

This presentation will summarise the work that the Met Office has undertaken for the water and transport sectors on climate change and precipitation extremes. Both industries have an interest in understanding how daily and sub daily precipitation extremes are predicted to change in the future. Extreme Value Analysis has been applied to Met Office Hadley Centre climate data for both past and future periods. Annual and seasonal results will be presented.
