

## **Technologies and meteorology education**

**A. Belotserkovsky** (1) and L. Karlin (1)

(1) Russian State Hydrometeorological University, St.Petersburg, Russia

The main goal of integrating technologies into education is not about making it more technologically advanced. The main goal is about making education better, i.e. providing students with an education that helps them learn more, better, faster, and to make appropriate use of their brains and bodies, and brain and body tools. To get the picture, we need to look at some general challenges and trends that take place in higher education and training, then to look at some general changes and trends in technologies that are likely to have an impact on education. After finding where those trends seem to meet we can look at what is working best now and what is not and why it is not working from our experience, and what might be expected to work in the near future taking into account the trends.
